DB2 for z/OS and Migration Planning

IBM is investing heavily in System z® and DB2® and in making our vision of Information On Demand come to life. This can be seen by many examples around the world where IBM customers are achieving business growth by exploiting IBM System z technology

DB2 for z/OS is at the heart of Information On Demand.

Your company has made large investments in applications based on System z and DB2. As growth and diversity of data rises, the need for DB2 to be smarter, more agile as well as stable and secure increases. This calls for new functionalities, internally and in supporting solutions, that enable you to utilize DB2 better and get the maximum return from your investment

Attend this one-day workshop and keep yourself up-to-date with how DB2 for z/OS, and surrounding applications, have and will evolve to help you solve your business issues. Learn about DB2 V9 features and benefits that improve productivity of administrators and programmers. We will also share how some of the common database administration and programming tasks can be done more efficiently in DB2 9, as well as Migration Planning Best Practices and Experiences. There will also be an opportunity to have a sneak preview of DB2 10 for z/OS.

Who should attend these sessions?

- Database Administrators &
- IT Managers
